'Jika Kamu tidak dapat menahan lelahnya belajar, Maka kamu harus sanggup menahan perihnya Kebodohan.' Imam Syafi'i

Chapter 1

Laporan

1.1 PEMAHAMAN TEORI

1.1.1 FUNGSI

- Fungsi adalah salah satu blok program yang sudah terorganisir terdiri dari nama fungsi, input variabel dan variabel kembalian. Fungsi digunakan untuk aplikasi anda dan tingkat penggunaan kode yang tinggi agar aplikasi lebih baik.
- 2. inputan fungsi digunakan untuk menerima baris input dari user dan mengembalikannya dalam bentuk string.
- 3. kembalian fungsi yaitu fungsi akan membaca sebaris input umumnya melalui keyboard sampai nanti dijumpai karakter newline(enter) dan akan mengembalikan string dari inputan tersebut.

```
# -*- coding: utf-8 -*-
2 """

Created on Fri Nov 1 23:47:00 2019

@author: ANIF
"""

def namaFungsi(inputanFungsi):
    return inputanFungsi

output = namaFungsi("Kembalian Fungsi")
print("output")
```

1.1.2 **PAKET**

- 1. Paket adalah sebuah manifestasi dari konsep namespace hierarkis python.
- 2. cara pemanggilan paket

```
1 # -*- coding: utf-8 -*-
2 """
3 Created on Mon Nov 4 01:35:19 2019
4
5 @author: ANIF
6 """
7 import math
8 print("Nilai pi adalah: ", math.pi)
```

1.1.3 KELAS

- kelas adalah prototipe yang ditentukan oleh pengguna untuk objek yang mendefinisikan seperangkat atribut yang menjadi ciri khas dari sebuah kelas apa pun. Class digunakan untuk membuat kelas baru dan nama kelas diikuti kanca kunci titik dua.
- 2. Objek adalah perwujudan dari sebuah class. Bila kelas adalah prototipe nya, dan objek adalah barang jadinya.
- 3. atribut yaitu semua class yang membuat objek dan semua objek tersebut mengandung karakteristik.
- 4. method merupakan fungsi yang didefinisikan di dalam suatu class.

```
1 \# -*- coding: utf-8 -*-
2
  Created on Mon Nov 4 01:41:54 2019
  @author: ANIF
6
  class Mahasiswa:
      totalMahasiswa = 0
8
9
      def __init__(self , npm , nama):
10
           self.npm = npm
11
           self.nama = nama
          Mahasiswa.totalMahasiswa +=1
13
      def tampilkanProfil(self):
           print("NPM :", self.npm)
16
           print("Nama :", self.nama)
17
           print()
19
      mahasiswa1 = totalMahasiswa("1184065", "Etika Khusnul Laeli")
20
      mahasiswa2 = totalMahasiswa("1184030", "Dyning Aida Batrishya")
21
      mahasiswa1.tampilkanProfil()
23
      mahasiswa2.tampilkanProfil()
```

```
print ("Jumlah mahasiswa adalah", Mahasiswa.total Mahasiswa)
```

1.1.4 Cara pemanggilan library kelas dari instansiasi dan pemakaiannya contoh dengan program

untuk membuat objek dari sebuah kelas, kita memanggil nama kelas dengan argumen yang sesuai dengan fungs pada saat kita mendefinisikannya.

cara pemanggilan

```
# -*- coding: utf-8 -*-
"""

Created on Mon Nov 4 01:51:22 2019

Qauthor: ANIF
"""

from Mahasiswa import Mahasiswa

mhs = Mahasiswa("1184065", "Etika Khusnul Laeli")

mhs.tampilkanProfil()

print("Jumlah mahasiswa adalah ", Mahasiswa.totalMahasiswa)
```

1.1.5 Pemakaian paket dengan perintah from kalkulator import penambahan

Pertama-tama kalian harus membuat program kalkulator.py untuk bisa melakukan penambahan sperti di bawah

```
# -*- coding: utf-8 -*-
"""

Created on Mon Nov 4 01:56:16 2019

Quathor: ANIF
"""

from kalkulator import Penambahan

hasil = Penambahan(10, 5)
print(hasil)
```

1.1.6 Pemakaian paket fungsi apabila file library ada di dalam folder

Untuk pemakaian paket fungsi apabila file library berada di folder yaitu untuk dapat melakukan atau menjalankan kalkulator yang berada di file folder.

```
_{1} \# -*- coding: utf-8 -*-
2 """
<sup>3</sup> Created on Mon Nov 4 01:57:55 2019
<sup>5</sup> @author: ANIF
8 from folder import kalkulator
9
10 a=100
b=50
12
13 hasil1=kalkulator.Penambahan(a,b)
  hasil2=kalkulator. Pengurangan (a,b)
15 hasil3=kalkulator. Perkalian (a,b)
hasil4=kalkulator. Pembagian(a,b)
18 print (hasil1)
print (hasil2)
print (hasil3)
print (hasil4)
```

1.1.7 Pemakaian paket kelas apabila file library ada di dalam folder

Untuk pemakaian paket kelas apabila file library berada di folder. Mahasiswa yaitu file Mahasiswa untuk melakukan atau menjalankan kode yang berada di file folder Mahasiswa tersebut.

```
# -*- coding: utf-8 -*-
"""

Created on Mon Nov 4 01:56:16 2019

@author: ANIF
"""

from folder.Mahasiswa import Mahasiswa

mhs = Mahasiswa("1184065", "Etika Khusnul Laeli")

mhs.tampilkanProfil()

print("Jumlah mahasiswa adalah ", Mahasiswa.totalMahasiswa)
```

1.2 KETERAMPILAN PEMROGAMAN
